We have meetings and get together at which I can give them updates. Most of them don't have net links due to bad phone lines. I don't have a mailing list yet, but I guess I should work on that. I'll give it a shot.

Gary,

Thanks for your information. I believe that the canals should be sampled. We are working out now how the sampling should be done and who would do it, so it may take some time. I will keep you posted on how this progresses. Also, if there are others there that would like to receive Gulfco information emails, just let me know.

Regards,

Gary Miller

Just as a followup to our phone conversation about the potential sampling of the adjacent canals, could you please send me an email as to your decision relating to testing the mud in the two canals in Bridge Harbor Subdivision. Many of the residents are interested in the outcome. The original lawsuit and health problems were all based on the windblown contamination which reached our neighborhood, and so most certainly the canals, which have been collecting sediment since they were created in the 1960's.
